

Claims

What is claimed is

1. A **baby bottle cap holder** to keep snap on baby bottle caps with baby bottles comprising: two elastic or other suitable material band like rings connected together via any suitable material to secure them to one another whereby one of the ring shaped elastic members is placed around the baby bottle cap and the other ring shaped elastic member is placed around the baby bottle.
2. The elastic band like rings that are placed around any suitable manufactured snap on baby bottle cap and any suitable manufactured baby bottle are made of any suitably stretchable material of sufficient elasticity to allow sufficient give to enable placement around a snap on baby bottle cap and baby bottle but not slip off unless being removed intentionally. Said band like rings may be of any width which enable them to fit securely around the snap on baby bottle cap or the baby bottle. Both band like rings may be of equal widths or unequal widths. In the case of unequal widths, the width of the band like ring which goes around the snap on baby bottle cap would be less than the width of the band like ring which goes around the baby bottle.
3. The connective member which secures ring 1 to ring 2 is made of any suitably stretchable or non-stretchable material of sufficient length to enable ring 1 to stay in place on the baby bottle cap while the baby bottle cap is either atop the baby bottle or while the baby bottle cap dangles beside the baby bottle. Said connector may be either flat or cord like.
